

Additive boosts engine

Fuel efficiency, more power and economy the end result

Delta Auto Spark is a proud supplier of Webasto products.

40 years of a family business

FROM a two-man team of Tony Pagano and Don Fragomeni in 1971, to today's team of more than 16, Delta Auto Spark is now headed by Piero Pagano and Carl Fragomeni, who have more than 30 years' experience in the automotive electrical and air-conditioning industry.

A member of the MTA, Auto Spark is one of the largest auto electrical operators in Western Australia.

"We believe we can offer you the best possible professional service no matter what kind of auto electrical or auto air-conditioning problem you may encounter," said a spokesman.

"From cars, trucks, even earthmoving equipment, you won't find anyone faster or more reliable."

Delta also specialises in trucks, heavy duty industrial and mining applications.

"We are proud stockists and installers for evaporative and refrigerative cooler systems like Webasto's NiteCool and bycool Mochila, as well as SleeperAir.

"We are also dangerous goods specialists for the transport and mining industries."

The Auto Spark Group celebrates its 25th anniversary in WA this year.

Individually, Delta is proud to be celebrating 40 years of family owned and managed business in Redcliffe.

Visit Delta Auto Spark at the Perth Truck Show, stand # 50/51, or visit www.autospark.com.au or phone 08 9277 7999.

DIRTY injectors and combustion systems degrade engine performance, which is often experienced by the driver as hesitation or power loss.

Chemtech Diesel Power is an advanced additive system specifically formulated to address these problems.

It effectively cleans diesel injector and combustion chamber deposits.

The result is improved fuel efficiency and economy, restored engine power and acceleration, reduced diesel "clatter" and reduced diesel smoke (lowers emissions).

Fouled-up fuel systems operate inefficiently, which can also significantly reduce fuel economy, increase operational costs and shorten engine life.

Diesel Power is an advanced additive system formulated to increase the service life of engines, protect your equipment investment and reduce maintenance costs.

Additional benefits include containing a biocide that helps prevent growth of algae and bacteria during fuel storage which causes filter plugging as a result, enhanced thermal and oxidation stability of diesel fuel to help reduce formation of gums and resulting filter plugging (Diesel Power improves fuel stability), handling of water in fuel more effectively for greater engine protection, by facilitating the break-up of stable fuel-water emulsions, improved anti-corrosion performance and

increased elastomeric compatibility to prevent damage to critical fuel system components

Diesel Power is specifically formulated as a concentrate to save money.

Diesel Power is added at a treat rate of 1ml per 1 litre of fuel. This means that 300ml treats 300 litres or 1000ml treating 1000L of fuel providing excellent value for money.

Is it possible to over-dose when using Diesel Power?

No, as long as X3 (three times) the recommended dose rate is not exceeded.

In diesel storage tanks it is a good idea to dose with up to X3 (three times) the recommended dosage.

This will minimise the chance of algae and bacteria growth over long term and minimise diesel oxidation

that results in insoluble gums and varnish forming during storage.

How long is Diesel Power effective when used in storage tanks?

It is recommended that fuel storage tanks be re-treated every three months to ensure ongoing fuel protection by minimising fuel oxidation and the growth of algae and bacteria.

Can Diesel Power kill (destroy and remove) algae and bacteria in an already infested tank?

No, Diesel Power is a preventative

additive and will not eliminate an already existing algae and bacteria infestation.

Diesel Power is recommended for addition to fuel to help prevent an algae and bacterial growth out-break.

If the tank is already infested (by example, evidence of black algae) the tank should be emptied and thoroughly cleaned out first.

Only then, add Diesel Power according to recommended dosage. Is Diesel Power safe to use in Bio-diesels fuel?

Yes, in fact Diesel Power can only benefit bio-fuels as bio-fuels are generally more prone to oxidation (break-down) of fuel resulting in fuel system problems. Diesel Power may assist by providing added stability.

In addition, Diesel Power may assist in cleaning injectors fouled-up when using bio-fuels.

Is Diesel Power suitable for modern high pressure diesel engines eg those with Common Rail fuel systems?

Yes, Diesel Power is suitable for most common engines in the market, including the latest designs as described above.

Chemtech Diesel Power is available in 300ml, 1L, 5L and 20L pack sizes from leading trucking retailers. For more information visit chemtech.net.au or call 1800 177 989

LIQUID CHROME HIGH SHINE

BRIGHT CHROME SPRAY

EYE CATCHING, BRIGHT REFLECTIVE CHROME FINISH, THAT IS EASY TO APPLY IN A SMOOTH AND EVEN SPRAY PATTERN

- Water and UV resistant, suitable for outdoor weather conditions
- Excellent adhesion, no surface primer required - Quick and easy application
- Suitable for truck and trailer wheels, bull bars, bikes, chassis and most metal surfaces
- Improved fan spray for a more even spray pattern

Available from leading trucking & automotive retailers. For more information visit www.chemtech.net.au or call 1800 177 989.
